

## 100 Years of Excellence - Woven Into Your Life.

Just like the individual yarns that make up our fabrics, Twitchell Technical Products blend 100 years of innovative products, brand excellence, and custom solutions into a pattern of success.

Since 1922, the Twitchell name has represented quality in yarns and fabrics. Our fabrics are in hundreds of products across multiple industries. We pride ourselves on knowing that our yarn, textile, and fabric is made here in the USA in our Dothan, Alabama headquarters. Our product is created here and made to last.

Many of our fabrics have arrived to market first, while simultaneously providing the best quality at the best value. As a leader in the textile market, we are continually refining our skills and knowledge to offer an extensive line of woven products. Each product is meticulously designed to meet industry-specific demands.

Not only do we have a large selection of stock fabrics, but we can produce custom fabrics to meet your unique needs. Our custom solutions offer limitless possibilities. Twitchell's ability to vertically integrate our technology and create custom solutions gives you the ultimate advantage over your competitors.

Textilene<sup>®</sup>, our trademarked PVC coated polyester fabric, is the original all-weather fabric. Textilene's<sup>®</sup> pigments are incredibly UV stable, naturally flame resistant and mildew resistant. Our raw materials go through a unique heating process to make the core yarn less susceptible to shrinkage. Textilene<sup>®</sup> contains a non-phthalate plasticizer and composed of REACH compliant materials.

At Twitchell, our mission is to ensure you are thrilled with every product ordered every single time. We align with your goals with a platinum service plan for a long-term focus. We believe business is built on relationships. You deserve the highest quality products and a partner you can trust.
